

Power Grid Generation Expansion Plan

Jack Baldwin, L&N STEM Shutang You

The power grid is very important to big companies, local businesses, and everyday consumers. The power grid connects the power plants to the consumers.

Before the need for massive electricity, gas lights provided light and coal furnaces warmed up homes. When Thomas Edison made a use for electricity with his inventions it changed the way people lived.

To make the presentation, I used google. For the poster, I used powerpoint. For this, I also used google drive.

In the end, I was able to make my final presentation with a total of 18 slides and the poster (approved by Shutang).

The future of power generation has a great one. In the future, power plant will have little to none pollution output and will be more efficient
